

- I downloaded new code and still can't get the code to work: sokkothemes.com/them/
- CSS sticker sheet - ensure all the fonts are as they are in the stickersheet specification, same size, same weight — **paragraph should have font-weight 300**
- Get an offer button has an off padding:

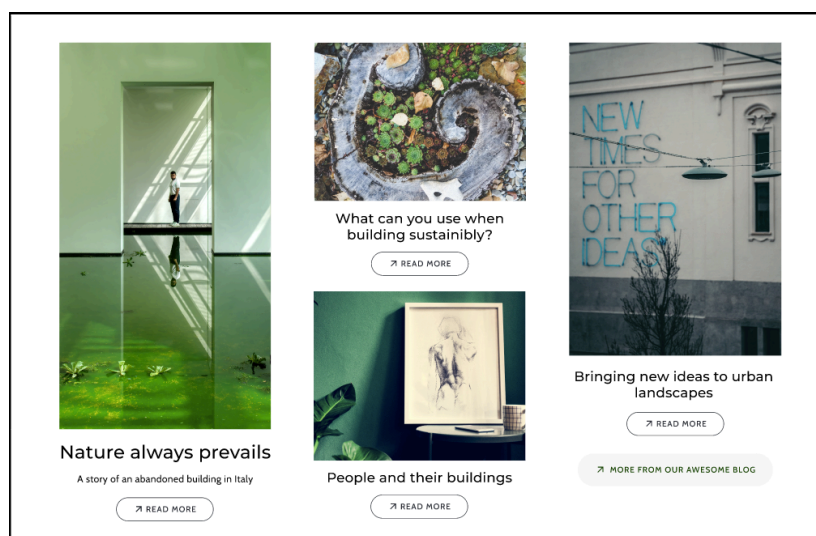

Prototype is on the right. Make sure font-weight is the same!

- The menu overflows on desktop..Make the menu fixed in position so that it stays in place if a user scrolls.
- There's a white background on the x on close in menu. The x is a bit big, make it smaller as in prototype

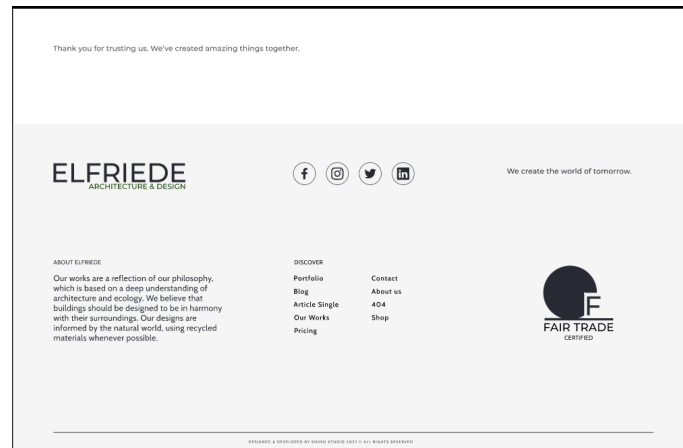

## Blog section

Make sure that the entire blog post is moving with the cursor on hover, not just the hovered image.

- Footer should be much smaller. approx. 70vh. See the prototype:

- Refer to Figma file for distribution and columns. It needs to look a little tidier.

## PORTFOLIO:

- on, mobile the initial idea was ok - the gray rectangles should always be visible, but not cut out. See the prototype

## Item single

- The grey rectangle on the next up part keeps disappearing both on mobile and on desktop

- gray background of the form disappears on scroll up

## Pricing

- gray background of the form disappears on scroll up

## Single post

- Let's fix the overlapping lines - if that's not possible, color the text, it doesn't have to be outlined.

---

Shop

- Good job adjusting the shop. Aspect ratio of the products is a bit off
-
